Lighting is a fast paced industry where new discoveries and innovations happen on a weekly basis. We know the importance of keeping abreast of developments and technologies, constantly researching new ways to make sure you receive the best possible solution for your project.

who we are

COMMERCIAL & RESIDENTIAL LIGHTING DESIGN

Re:light is a Bristol-based lighting design consultancy which was established in 2001. We work both nationally and internationally. We offer a full and open lighting specification service ensuring our clients get the best possible solution in terms of aesthetics, practicality, energy efficiency, cost, maintenance and compliance.

We are driven by the desired lighting effect and focus on the solution. We are manufacturer-independent giving us full scope to specify the right products to execute your vision.

Our team has the passion to make light work.

our services

FULL DESIGN

The most popular of our design services. This is ideal when you want an all-inclusive lighting design package for your project. We will be with you throughout the project supporting you on all lighting related matters from the initial concept to site support.

SPECIFICATION

If there is already a fully developed lighting design scheme in place, we can assist with the specification only. We will source the appropriate fittings for the lighting layouts and budget, ensuring you have the right products for your design. This service is chargeable; however, we provide quotations from manufacturers with discounts for you to procure directly.

PROCUREMENT

If required, we offer a procurement service. Costs are based on a fixed fee which can be agreed at the start of the project or at a later point when the procurement of fittings becomes relevant.

We work on an open-book basis where all original manufacturer prices are shared with the client for approval before purchase.

PARTIAL DESIGN

Partial design is tailored for you to include only the documents you wish to have. The most common partial designs are: 'Concept & Fittings' and 'Fittings & Layouts'. This service is suitable when you don't require a full design and related documentation. We also offer a partial design based on an hourly rate for small works.

LIGHT CALCULATIONS

Lighting calculations tell you the exact light levels you will receive within the space and its visual effects on surfaces. We have extensive experience in lighting calculations using programs such as Dialux to meet building regulations or planning requirements.

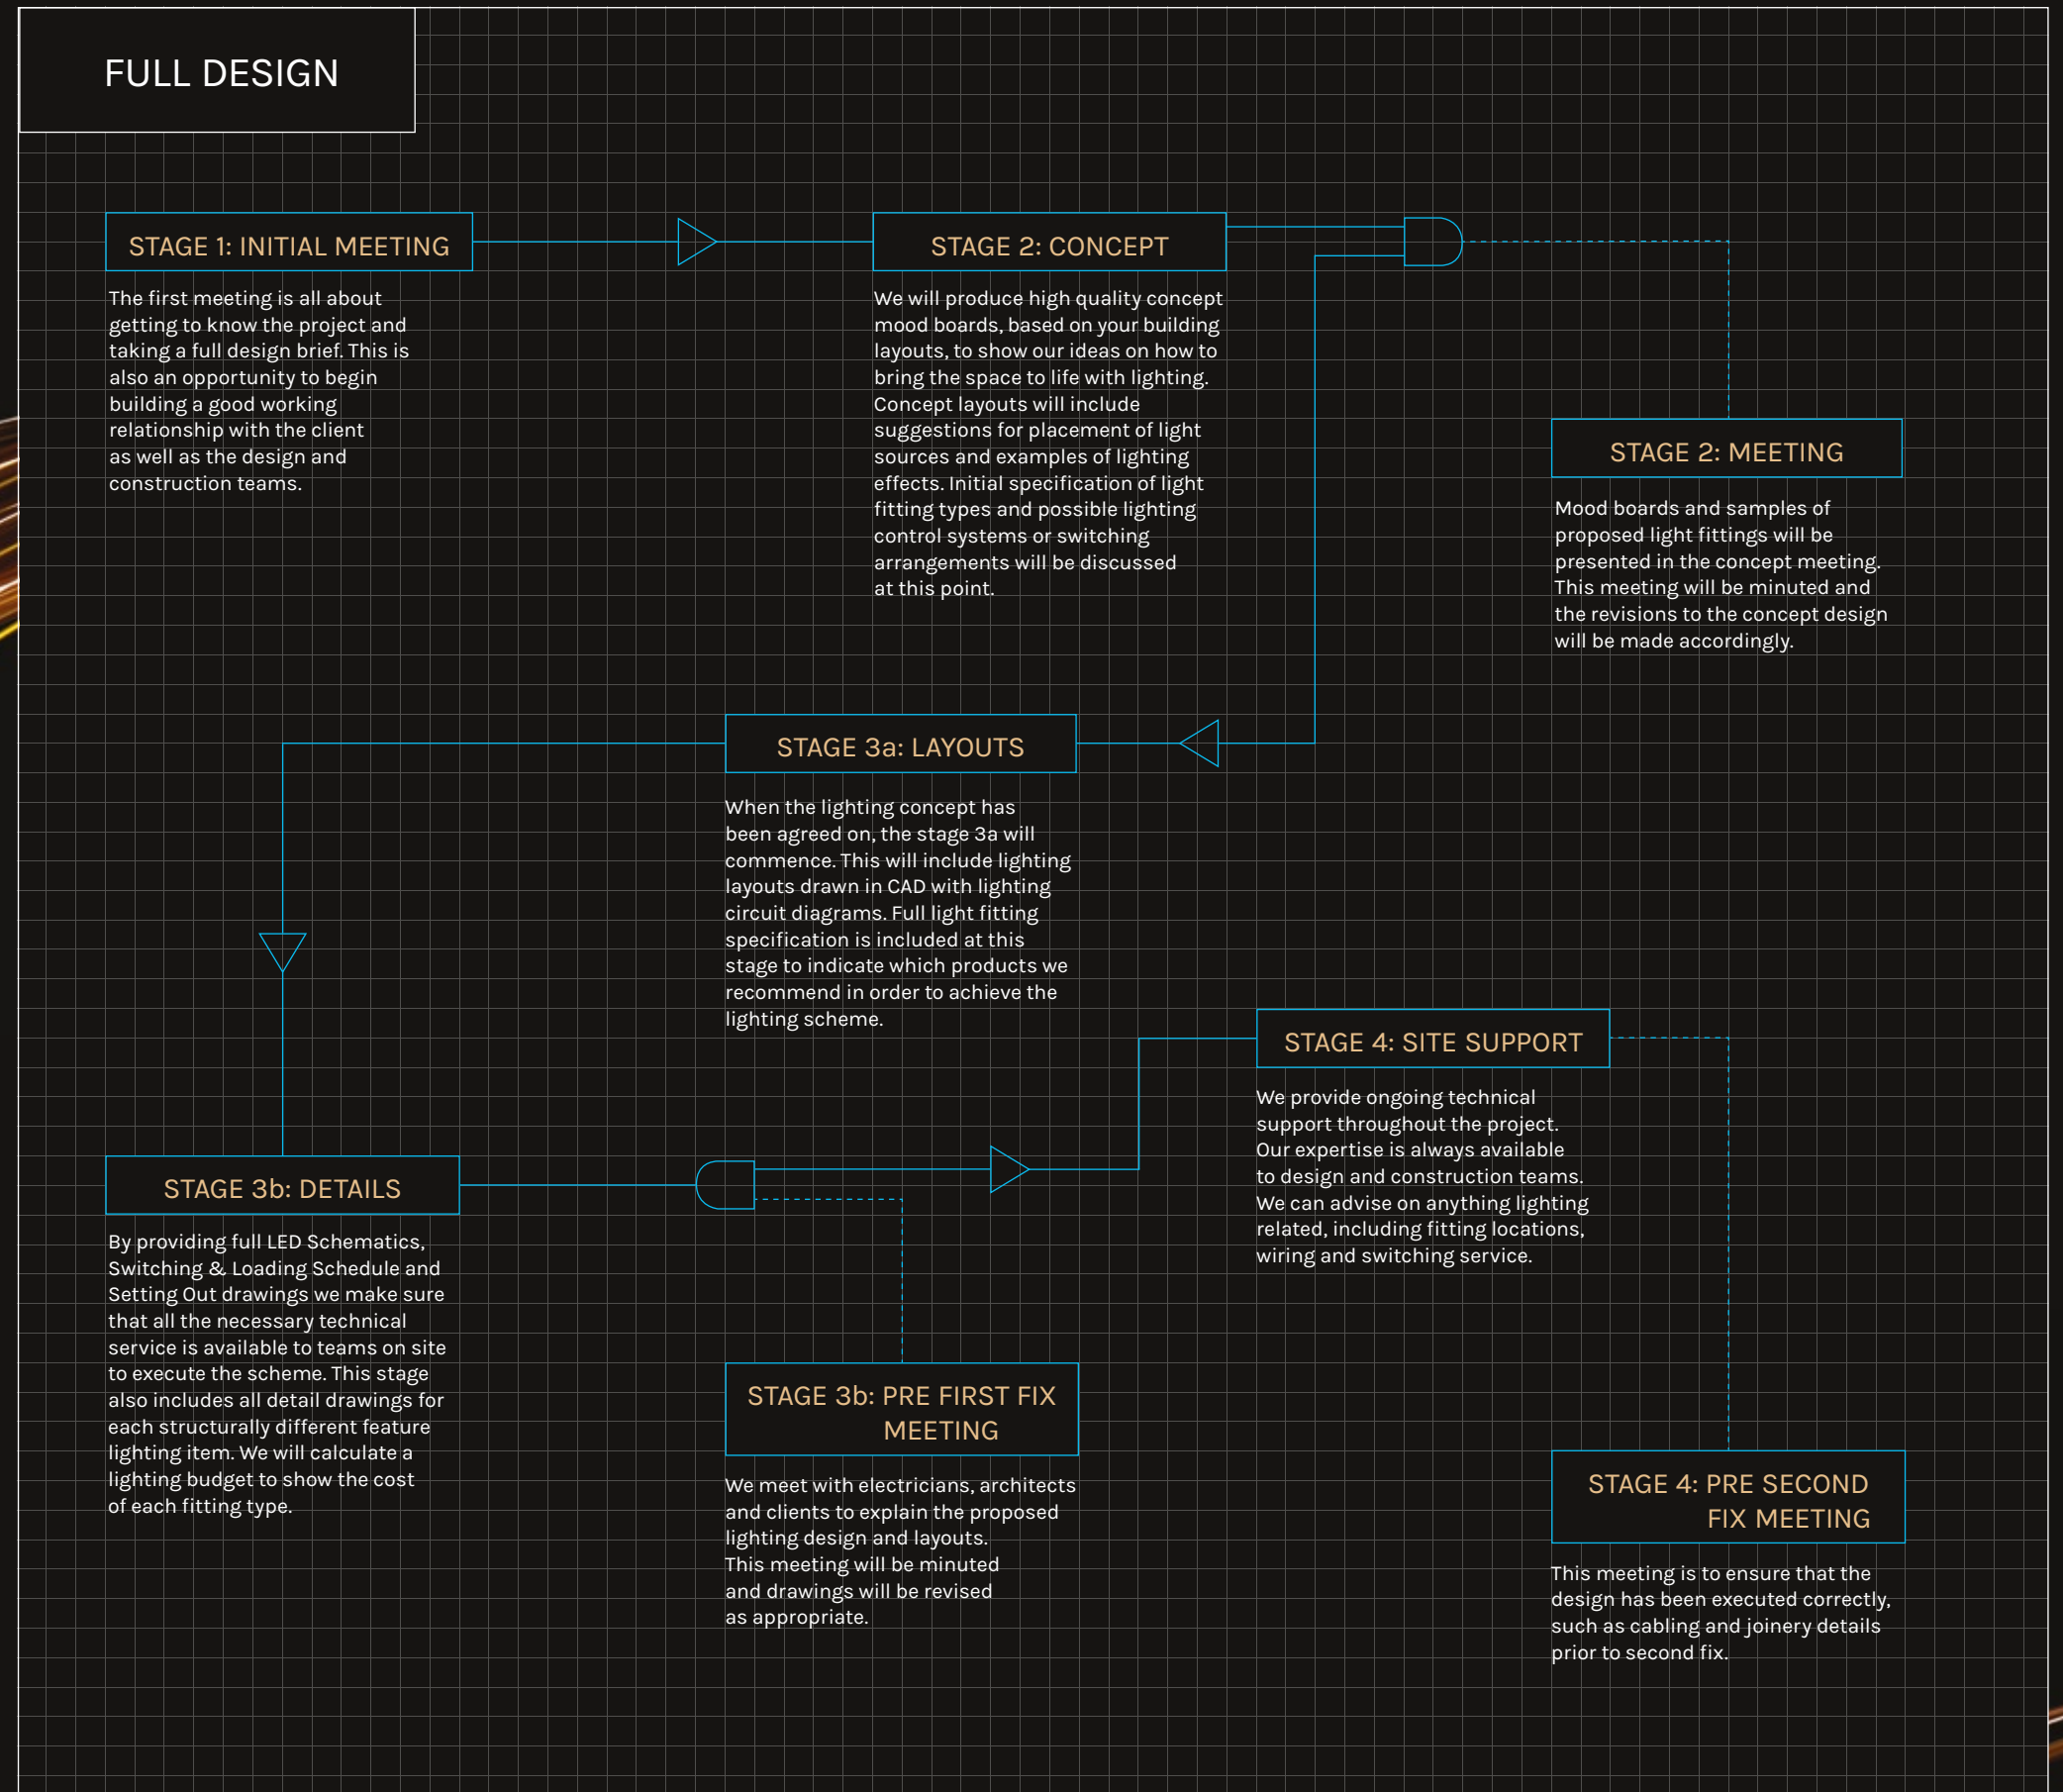

Calculating light levels is most commonly used in the commercial environment; however, it can also be required in residential projects when working with large spaces or where light spill and environmental factors are key.

design process

FULL DESIGN

Full design includes all necessary documents that are required for a coherent completion of the desired lighting effect in every project. Whether you want us to design the whole building or only key spaces, the full design package gives you everything from concept to final site support:

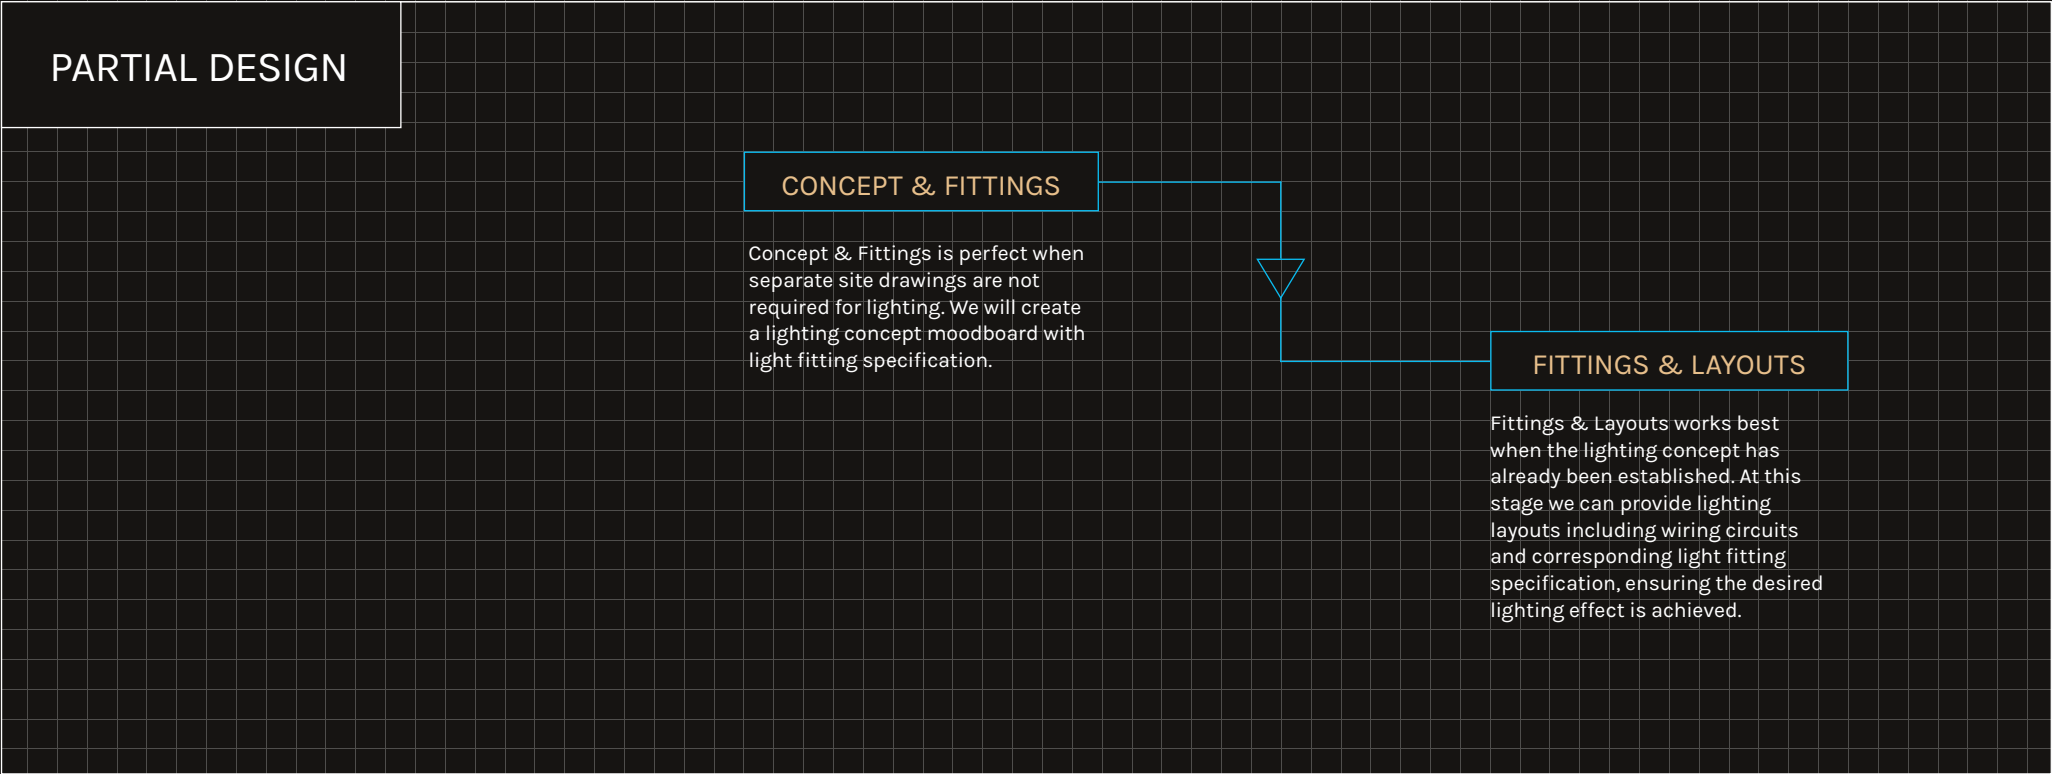

- Stage 1: Initial meeting
- Stage 2: Concept
- Stage 2: Presentation
- Stage 3a: Layouts
- Stage 3b: Details
- Stage 3b: Pre First Fix Meeting
- Stage 4: Site support
- Stage 4: Pre second fix meeting

PARTIAL DESIGN

Partial design will be tailored to fit each individual project and based on a fixed fee. When a full design scheme is not required, we offer targeted services and expertise in all areas of lighting:

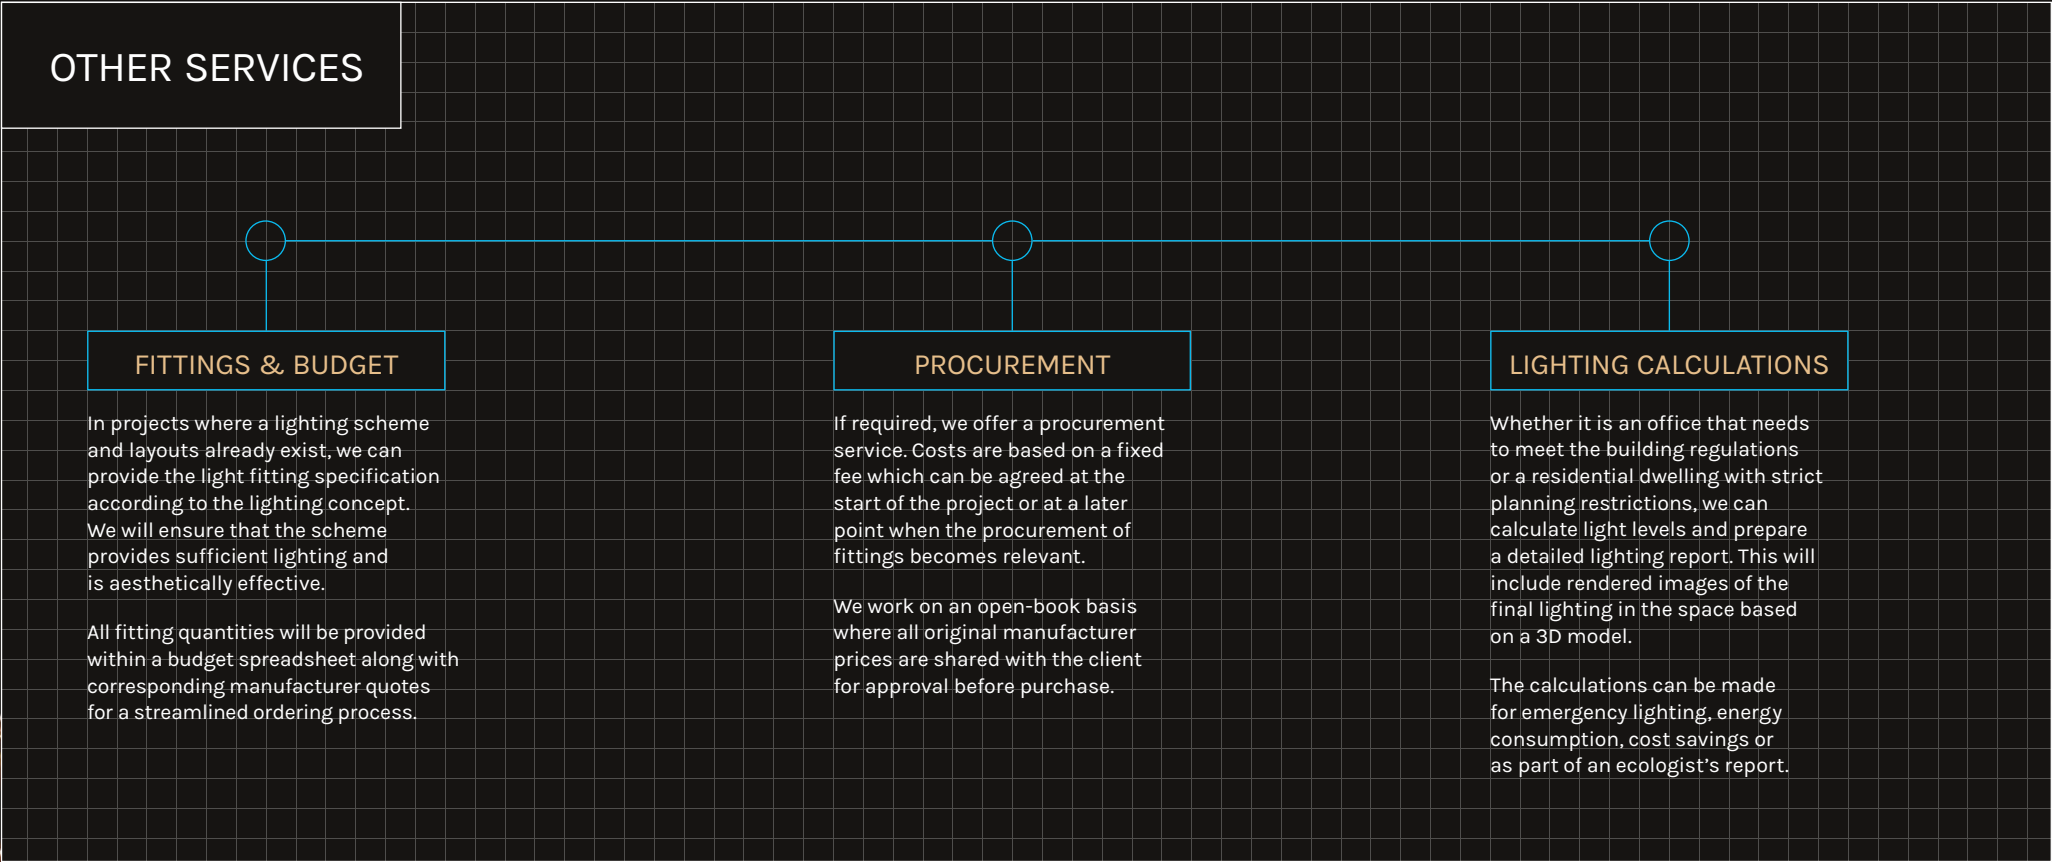

- Concept & Fittings
- Fittings & Layouts

OTHER SERVICES

We offer a variety of other services which do not include any design elements and can be agreed on a fixed fee. These are sometimes included in the full design if appropriate to the particular project:

- Fittings & Budget
- Procurement
- Lighting Calculations

commercial work

case study

Seco Tools Global Headquarters,
SWEDEN

THE BRIEF

Seco Tools global headquarters in Sweden was to have a major renovation – and as a key part of this, it was deemed vital to build a new marketing and training centre. As with other Seco projects the design was to reflect their strong and innovated engineering background. The lighting design was to be strongly architectural without being overstated.

THE SITE

The headquarters includes a research and development centre with a large manufacturing facility, and is situated in Fagersta, about 150km north of Stockholm. The majority of the massive site had not been updated since the 1970s.

residential work

case study

Luxury Home,
London, UK

THE BRIEF

Re:light were appointed as part of a large team to create an imaginative lighting solution that was to reflect the high specification, material finishes and architecture design for the project. In short it was to feel luxurious but not overstated.

THE SITE

This traditional Georgian London town house situated in St James originally consisted of 6 floors. Following substantial alterations two sub-basement levels were excavated. The three subterranean floors were designed with a more contemporary feel and use with only minor remodelling in the more traditional floors above.

our clients

We work globally with companies large and small and have built many productive and long lasting relationships through a combination of good communication, flexibility, price, quality and performance.

Re:light have provided architectural lighting design solutions on a number of Swinhay projects. Their innovative approach has achieved a variety of effects from dimmable recessed fluorescents in feature ceilings to the design and specification of bespoke light fittings.

IAN McMURTY
Swinhay Projects (Director)

Dom, the team at Re:light and their lighting solution were an integral part of transforming our new open plan workspace into the incredible environment we have today. What impressed me the most was the aftercare service I received, which was prompt, understanding and decisive. It was always a pleasure working with Re:light and I will be doing so in the future.

PAUL HIPKIN
SECO (Global FM Team)

Working with Dom from Re:light on the Manor project gave us huge confidence and resulted in a great lighting scheme. The lighting effects had the desired level of drama without looking too staged. We would recommend Dom on any project. Nothing is too much trouble and his service is thoroughly professional.
